Subject: Algae Bio-fuel

James W. Moore and Sue Noe:

February 4, 2010

I read recently, the county's consideration of investing 10 Million dollars in algae based bio-fuel development. I would like to comment concerning the potential non-viability of this project, especially under the present circumstances. The original conception of algae oil as a motor fuel was conceived by me in conversation with another person who took the project forward in its initial stages. In the first place, I don't feel that Lee County has the financial resources to risk this large amount of money on such a problematic unsuccessfully explored project. It appears from articles on the internet that the oil is too expensive to produce to make it economically feasible at this time. This is compounded by the unwillingness of the involved parties to reward advancements in the project to the advancing inventor. Another reality is that this is clearly not the best usage of the county's funds even if it is successfully economized to compete with gasoline in comparison to my new conceptions and my ability to create new projects through custom conceptions with very low R&D cost and with full cooperation of the world's top inventors in reducing R&D cost through problem solving abilities. I also have excellent analytical abilities to select the most viable projects considering the present state of the economy. Our top investment is in our own core group. This consists of a large group of present patent pending invention and the associated clerical, drafting, and engineering professionals. With your funding consideration, this expansion of our Lee County based company will add high paying jobs in the fields of engineers, draftsmen, clerical workers, R&D developers, and scientists, facility building construction trades, tool and dye makers, etc. As the world's largest conceiver of marketable and valuable intellectual properties, Lee County can become as large of an international business hub as is desired. I have created intellectual property booms in each city that I've lived in however, the affects were largely spread out due to intellectual property dissemination due the patent office's erroneous patent awarding and other types of transfer resulting non-filing of the original receiver. Our company is presently severely under funded due

to lack of investment that may become compounded without final patent awarding and manufacturing rights enforcement by the USPTO through my proposed regulation improvements. Our second best product involves conceived patent pending and non-conceived patents ready for patent pending startups within 120 days. It's our estimate that with 10 Million dollars you could startup viable new businesses in a quantity of 10 to 30. Due to the unsatisfied consumer demand involved in these new startups, their financial success would be virtually secure. The only variable factor that we cannot control is the USPTO placing the patents into the correct name. We can guarantee that when initially disclosed, the item will not be found anywhere on the internet. We can also guarantee that the product will become a viable marketable product in 90% plus situations or we will replace it with another one. This also assumes sufficient funding and the cooperation of the manufacturers and R&D persons.

Lee County should receive its intellectual property from its source and not choose from picked over projects that have far lower odds of success. Without these individuals having new break through, there is little chance of their projects advancing to a marketable stage. Please contact us with all of your project viability considerations. We can prepare consultant drafts for your consideration.

Keep in mind that establishing a large volume of new companies creates more jobs per dollar than attempting to lure established companies from other areas. Establishing new companies in our county increases the likely hood of owners and managers from Lee County staffing new businesses in Lee County. Also, the spinoff jobs will create lower paying jobs for Lee County workers that are better than no jobs at all. In addition, once established, the companies may opt to transfer technologies gained through startups to foreign manufacturers for cost competitive long term manufacturing. The funded profits will be returned to Lee County. Lee County owners for re-investment in new startup businesses and the cycle will be repeated with additional monies being spent in county to increase overall Lee County economic viability. Please visit my website to view all of my special order invention creation fields (essentially all fields) and get back with me as soon as possible.

Thank you for your consideration in this matter.

Sincerely,

Michael R. Thomas
