Turning Research into Inventions and Jobs

News Type: Event — Seeded on Wed Sep 23, 2009 10:06 AM EDT

Michael R. Thomas

Basic research will not produce any benefit at all without specific experiment creation. Only through invention, can research and development produce finished products. Scientific R&D breakthroughs begin with, in most cases, inventions conceived outside the laboratory. The only way to stimulate invention and innovation is to ensure that compensation is awarded to inventors. The world is suffering from an inventor exclusion problem with companies only wishing to wait out or trample the inventor's intellectual property rights to the point that the inventors have realized the fruitlessness of their brilliant efforts. The only way to combat this is government finance of business startups concerning the most promising intellectual property conceptions of inventors. President Obama's Economic Stimulus Program has not provided one thin dime for these vitally important projects. We cannot begin to create new jobs without the conception of new viable products. Until we do this, we will continue to lose jobs as consumer demand becomes satisfied in the existing products production. Only through progressive patent reform can improved inventorship determination methods award these inventions to the correct individuals thereby stimulating new products and job creation see our website at www.inventingconsultantcreator.net
