501 Westlake Park Boulevard
Houston, TX 77079

May 4, 2010

Thank you for your response concerning my letter with regards to improving on or offering successful alternatives to your present oil slick containment efforts. I feel that the likely hood of your successful efforts to stem the flow of oil will likely not be successful or significantly delayed due to your present non-acceptance of my examination of your full situation concerning methods already tried and having a potential arsenal of ideas at your disposal in the event of failure of the methods that you have embarked on presently. Adding an additional method or methods would greatly enhance your chances of rapid success and would allow you to start additional projects in the event of failure of your primary project. If you wish, please provide me with a list of your present methods, either in construction or on the drawing board. Based on this information, I may be able to formulate new and unheard of methods with a high probability of success. Please don't send any ideas that you or your associates haven't patented. Obviously, receiving ideas for free ensures maximum profit or in this case, reduced clean up cost on your part. However, the reality from my observation is that nothing significant will be gained from this due to the inability of the individuals involved to conceive. From my perspective, I would like to contribute. However, being in the occupational field, I cannot make a living like this and it is immoral not to reward brilliant conceptions with financial reward since this would detour the creation of initial inventions due to the fact that non-inventors that receive the information make or save millions and billions of dollars and the policy violates the civil rights of the inventor with regards to the right to be granted a patent and to have the creation used with compensation. I feel that with your company's expenditure of more than six million dollars a day on oil spill containment and your liability concerning the oil that has not been recovered with regards to full clean up completion that you can well afford to pay the amounts that I have asked to create products for you. Due to my present financial situation, I am unable to process any more patent application without further financial assistance. The financial inclusion of me in this project will also help to ensure the flow of the world's top intellectual properties into the patent office, continuing the assurance of human advancement through innovation and invention.

Sincerely,

Michael R. Thomas
